

# e-ON Projects

**You only need  
an internet connection**

**E-ON Projects** is an innovative application that provides the technology to create, display, manage, link and share all the information required for the successful management and coordination of a project.

The right tool for project managers to help them with assignments, to schedule costs and revenues and to manage billings.

With cloud computing infrastructures that enable users to act over the web without needing any kind of software installed on their devices.

Everything is accessible from a single application with workflow functionality.

**E-ON Projects** provides real time reliable information to support project management by all involved parties.

It improves the flow of transactions and eliminates all redundant activities in a user friendly environment.

Developed with innovative standards for integrated provision of services over the web it successfully interfaces with main systems and third party applications to exchange information and data.

It is flexible and fully customizable to the needs of each company by adjusting its extensive parameters.

**A tool to collaborate and run Projects.  
Assign Tasks, Track Progress, Manage Costs  
and Revenues.**

**Secure Access with no time or location barriers.  
With a small subscription fee per user.**

## Project & Tasks Management

All critical financial details of the project in one place to view on screen.

- ❖ Cost Estimates
- ❖ Revenue Estimates
- ❖ Terms and schedules of payments
- ❖ Detail cost transactions
- ❖ Status and Progress details

An overall or detailed view of the current financial status of a project is available at all times by section, stage or task. The project status can be presented in numbers or in graphs.

## Budgeting

Cost estimates and budgets are calculated for the overall project or for tasks.

Cost budgeting can be calculated individually or interface with the Accounting system to pull primary cost elements. Budgets can be forecasts or actual.

The elements of cost can be presented in a Gantt Chart, as a completion percentage of the project and of its individual costs according to the initial estimates or revised budgets.

## Related Documents

Ability to attach various documents of transactions with third parties (Purchases Invoices, Expense Reports, etc.). These participate in shaping both the cost and progress of the project. Also these documents can automatically update the stocks and inventories and support future purchase orders.

## Assignments

Workflow functionality is used to assign tasks to people or business units.

The system is supported by time reports or time sheets. So at each time it is evident who worked on each project, how much was their added value and of course what were the revenues they generated.

Each person or unit can participate in one or more tasks or stages in each project.

## Reports

One of the strong advantages of E-ON Projects is the generation of Reports. Project managers have at their disposal a sufficient mechanism to generate various reports according to their needs. So they can produce reports by date, by task, by person etc. These reports help them have an accurate image of the project at all times.

The "Chargeables" report is one of the most critical and can be generated to present physical units or monetary units.

## Task Scheduling

Ability to schedule repetitive or periodic tasks and activities.
